Strategisches Prozessmanagement

Agenda

Six Sigma – Background

DMAIC Circle

Define an Initiative

Analyse Problem

Outlook

6σ Overview

Fulfil customer requirements completely and in a profitable way

Improve quality by reducing waste in an existing process

Quality is measurable and can be described using statistical key figures (mean, derivation)

Origins in manufacturing industry (e.g. General Electric)

Central tool: DMAIC circle

What does the letter σ stand for in statistics?

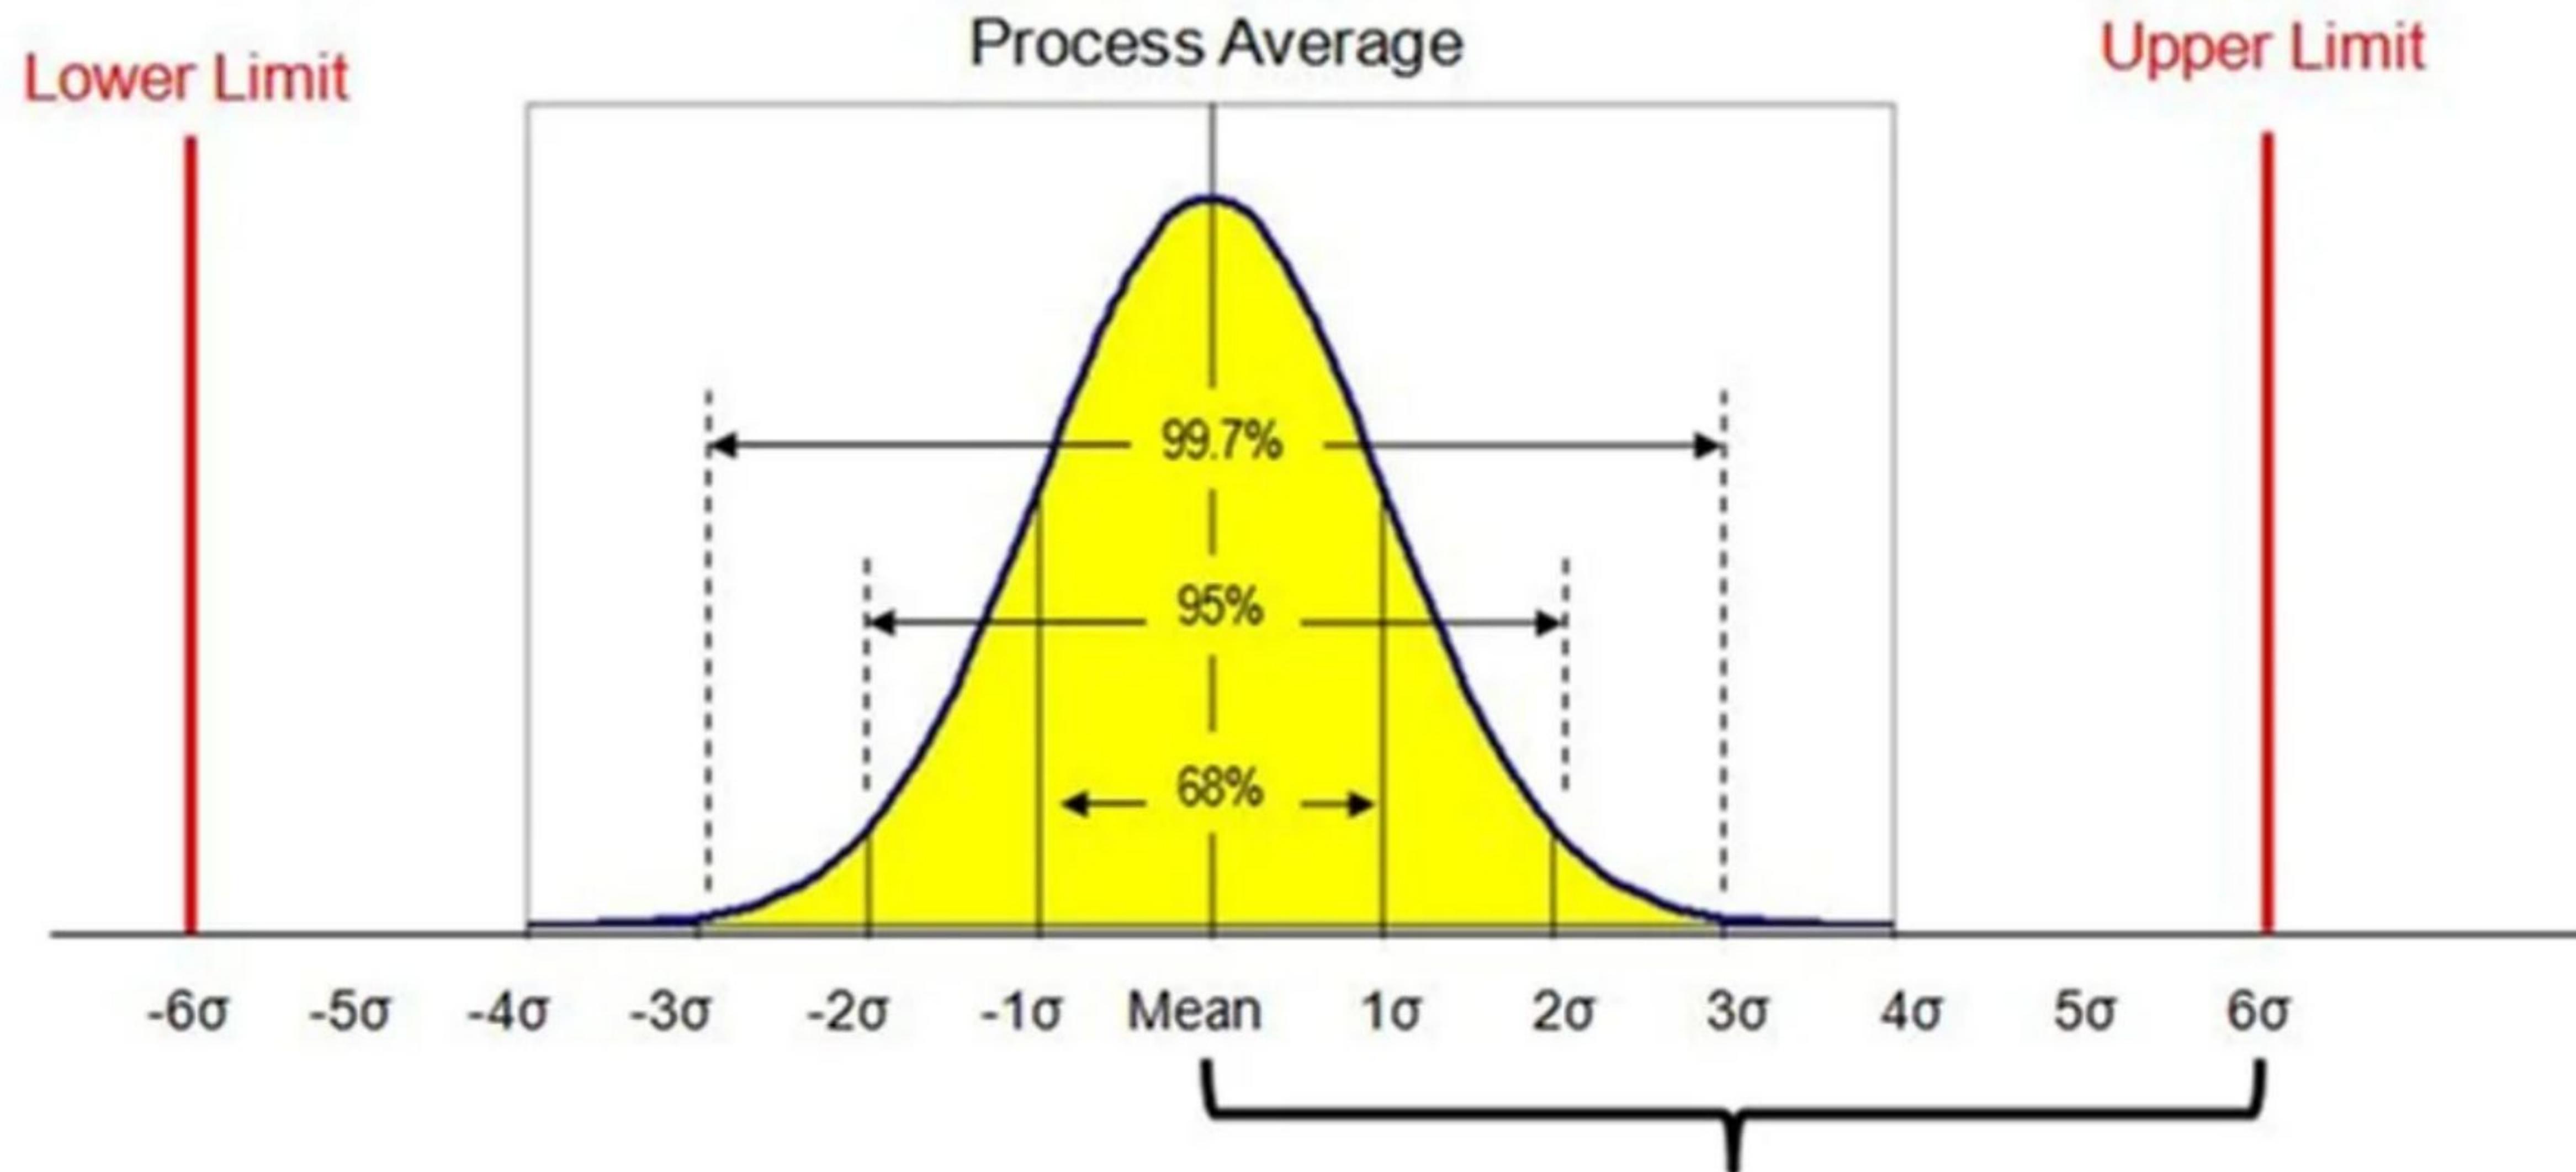

standardsabweichung

standardabweichung

standard deviation

std deviation

6 σ : Background

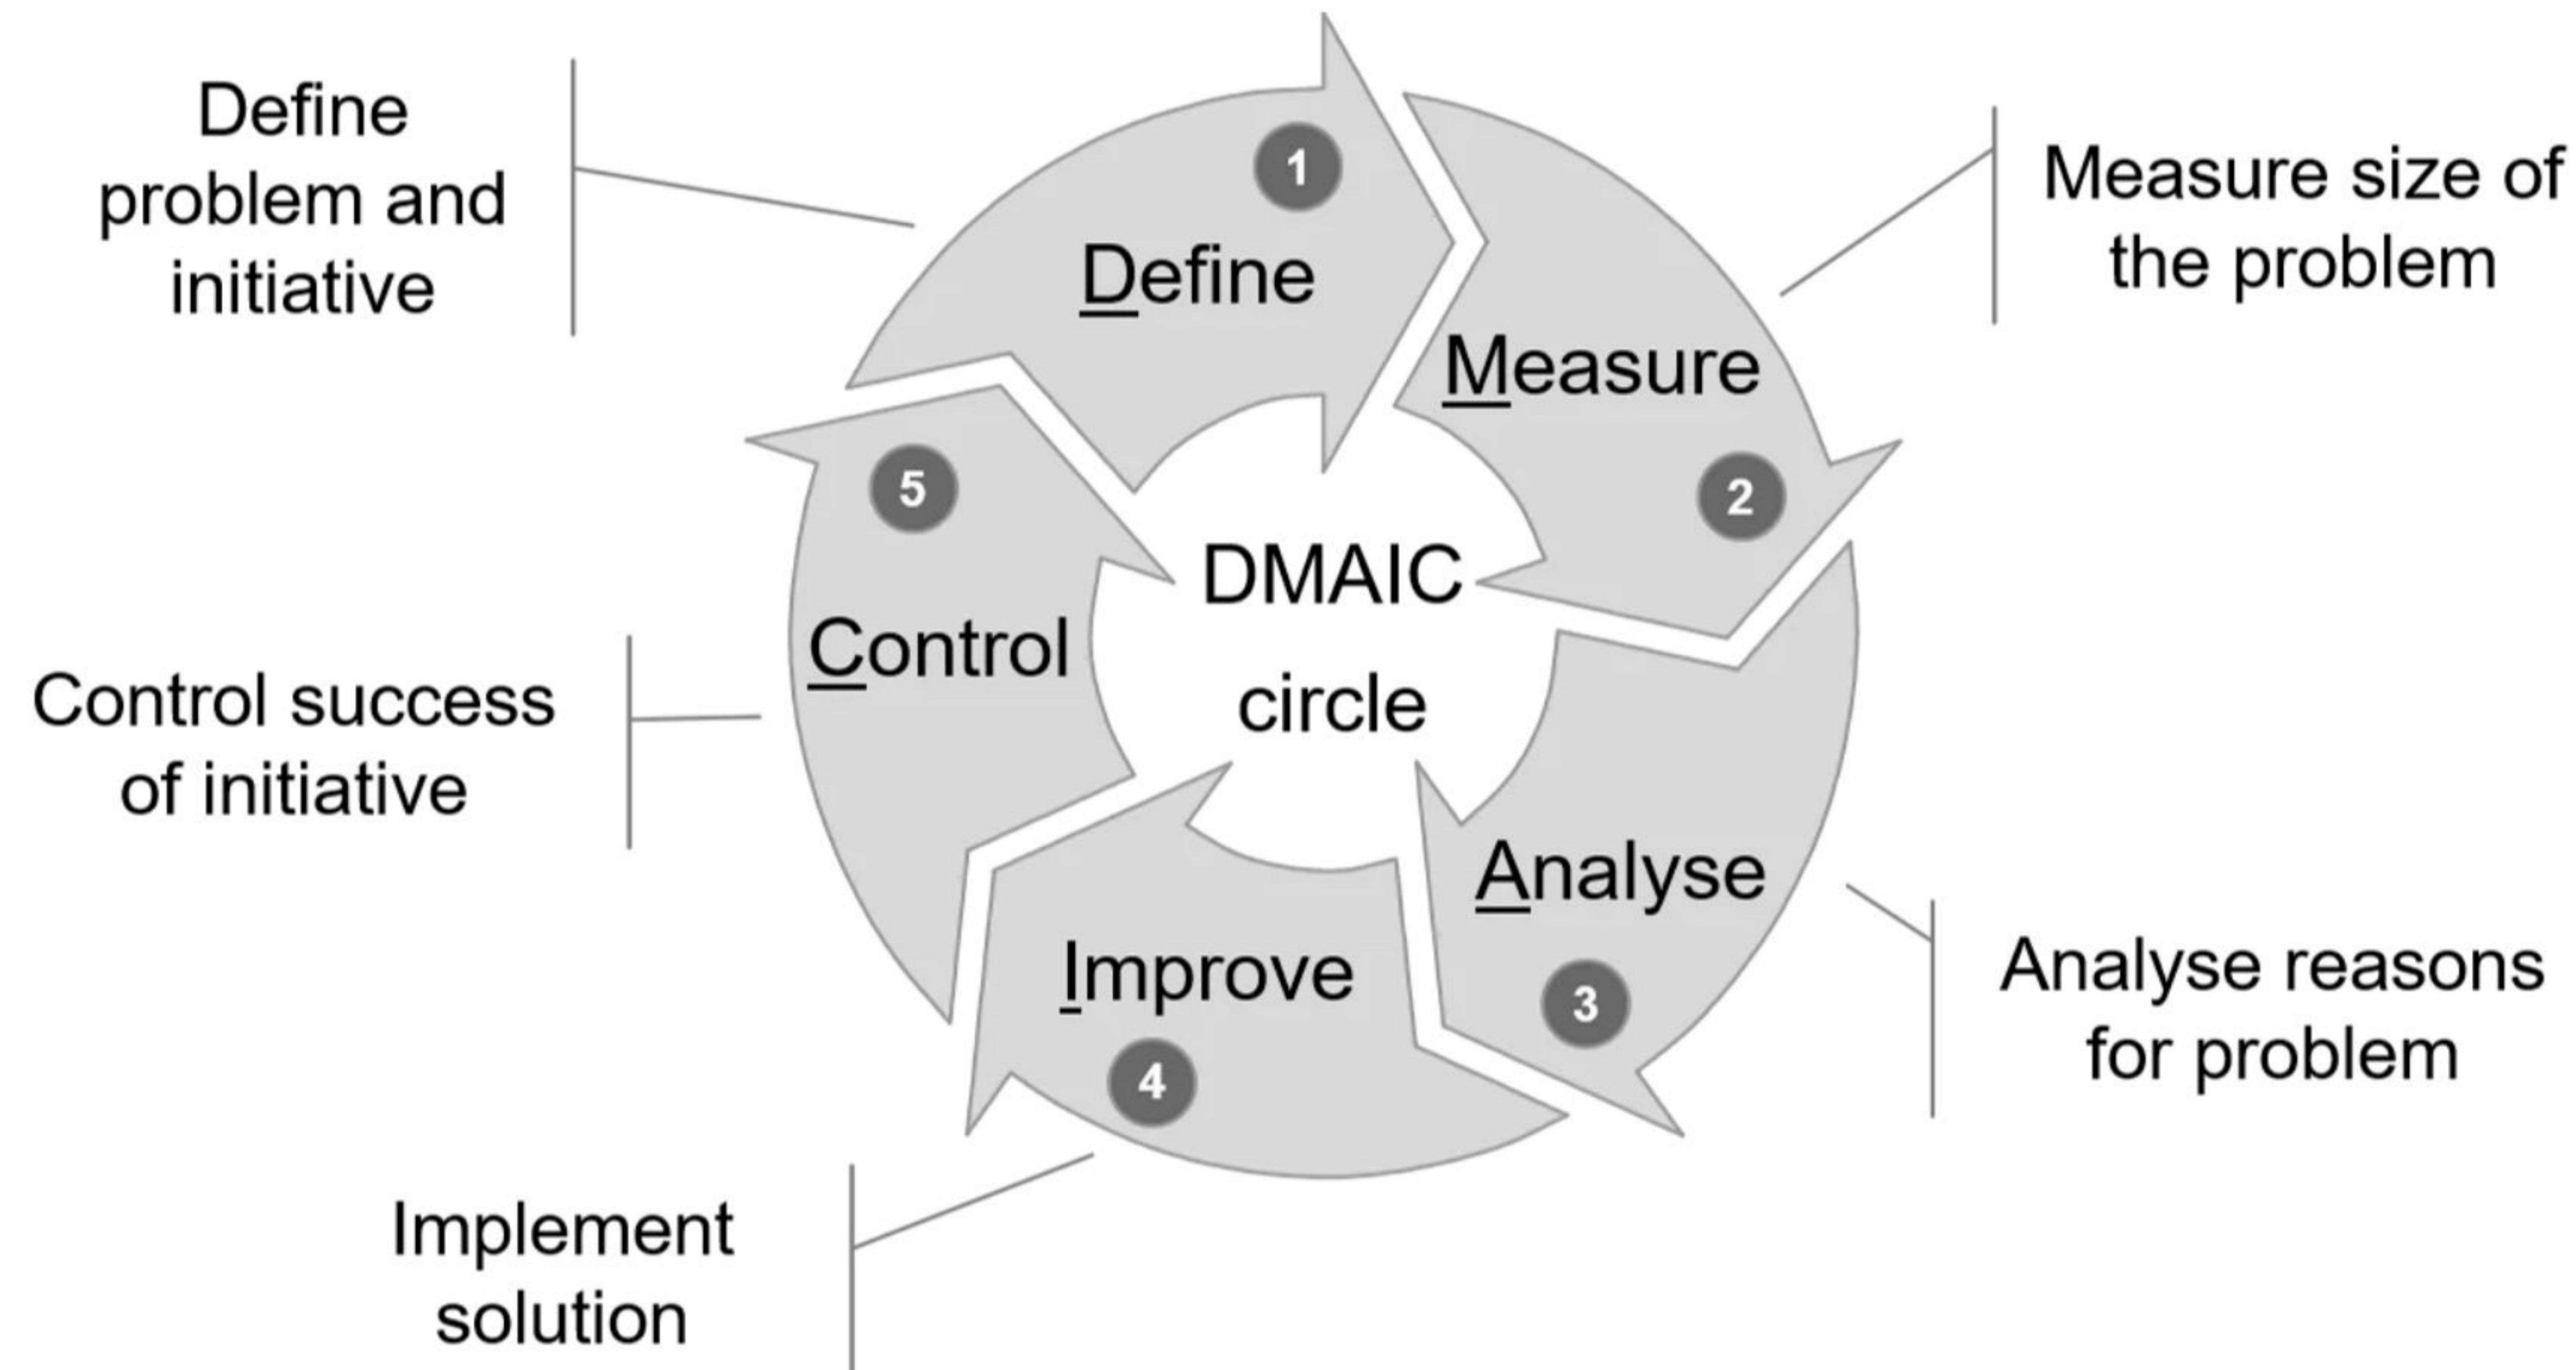

Source: <https://www.leansixsigmadefinition.com/glossary/six-sigma/>

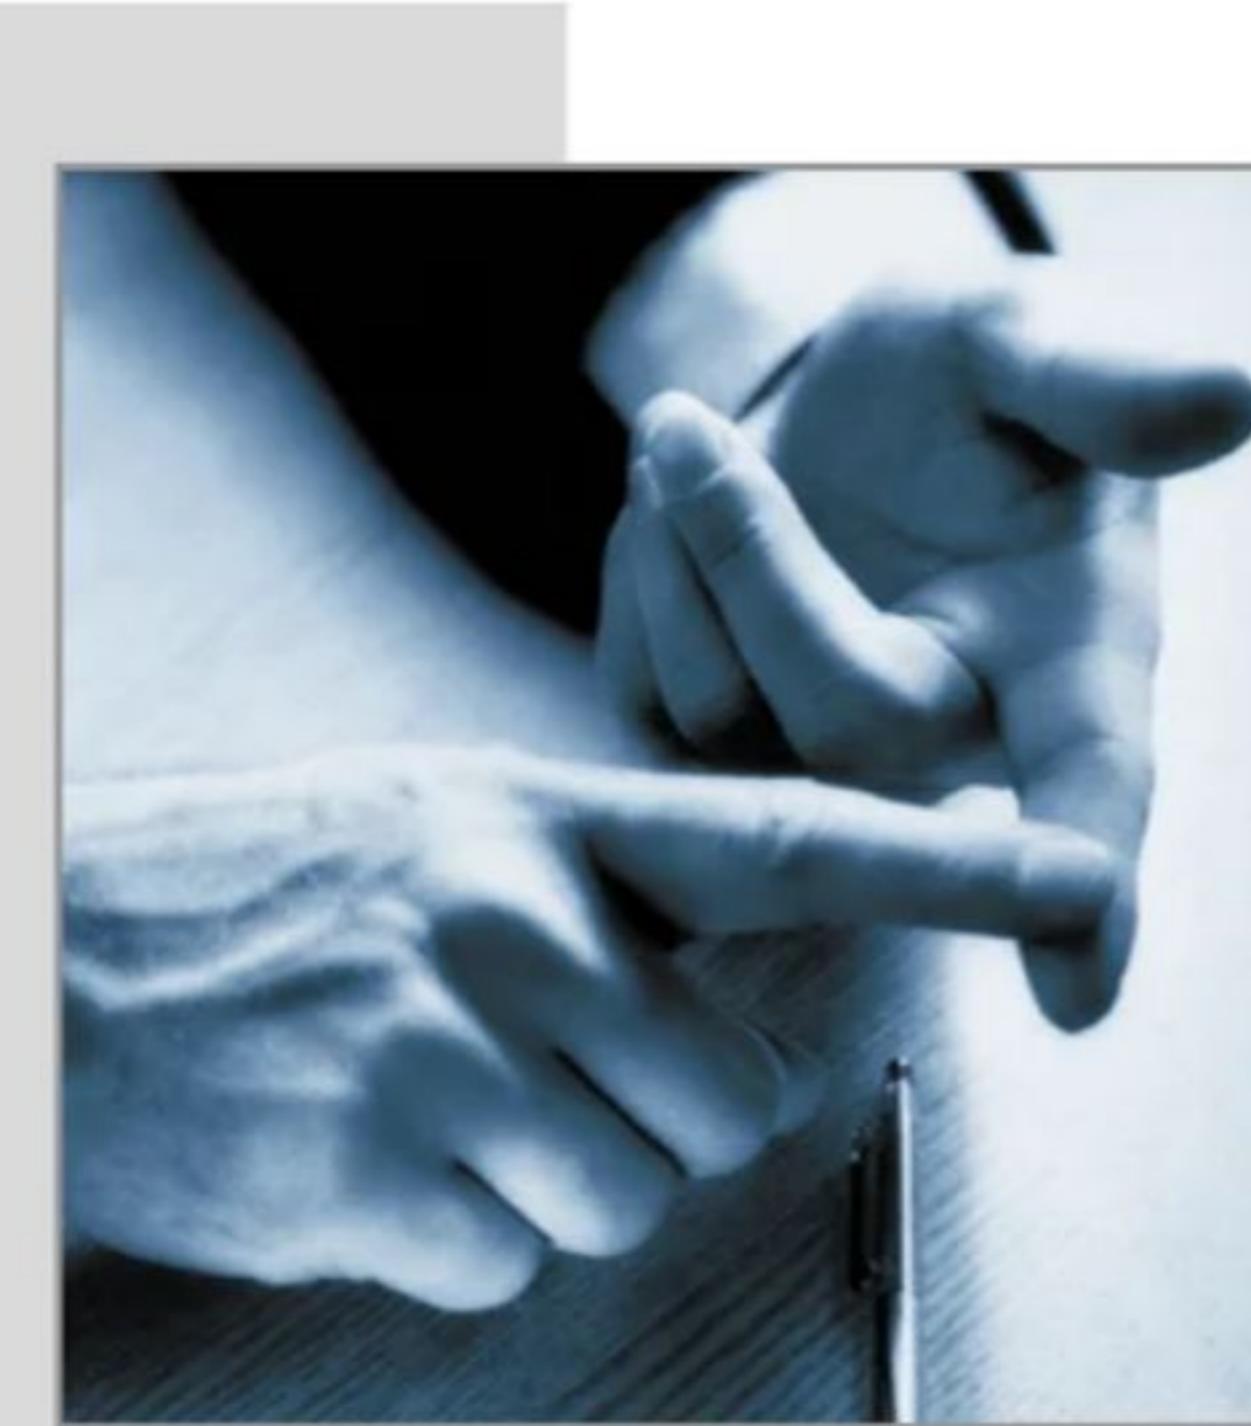

Yield and Defects Per Million Opportunities (DPMO)

σ level	Number of defects per million opportunities	yield
1 σ	690,000	68.27%
2 σ	308,537	95.45%
3 σ	66,807	99.73%
4 σ	6,210	99.9937%
5 σ	230	99.99994%
6 σ	3.4	99.999998%

Improvement Process: DMAIC

Criteria for Using DMAIC

Topic

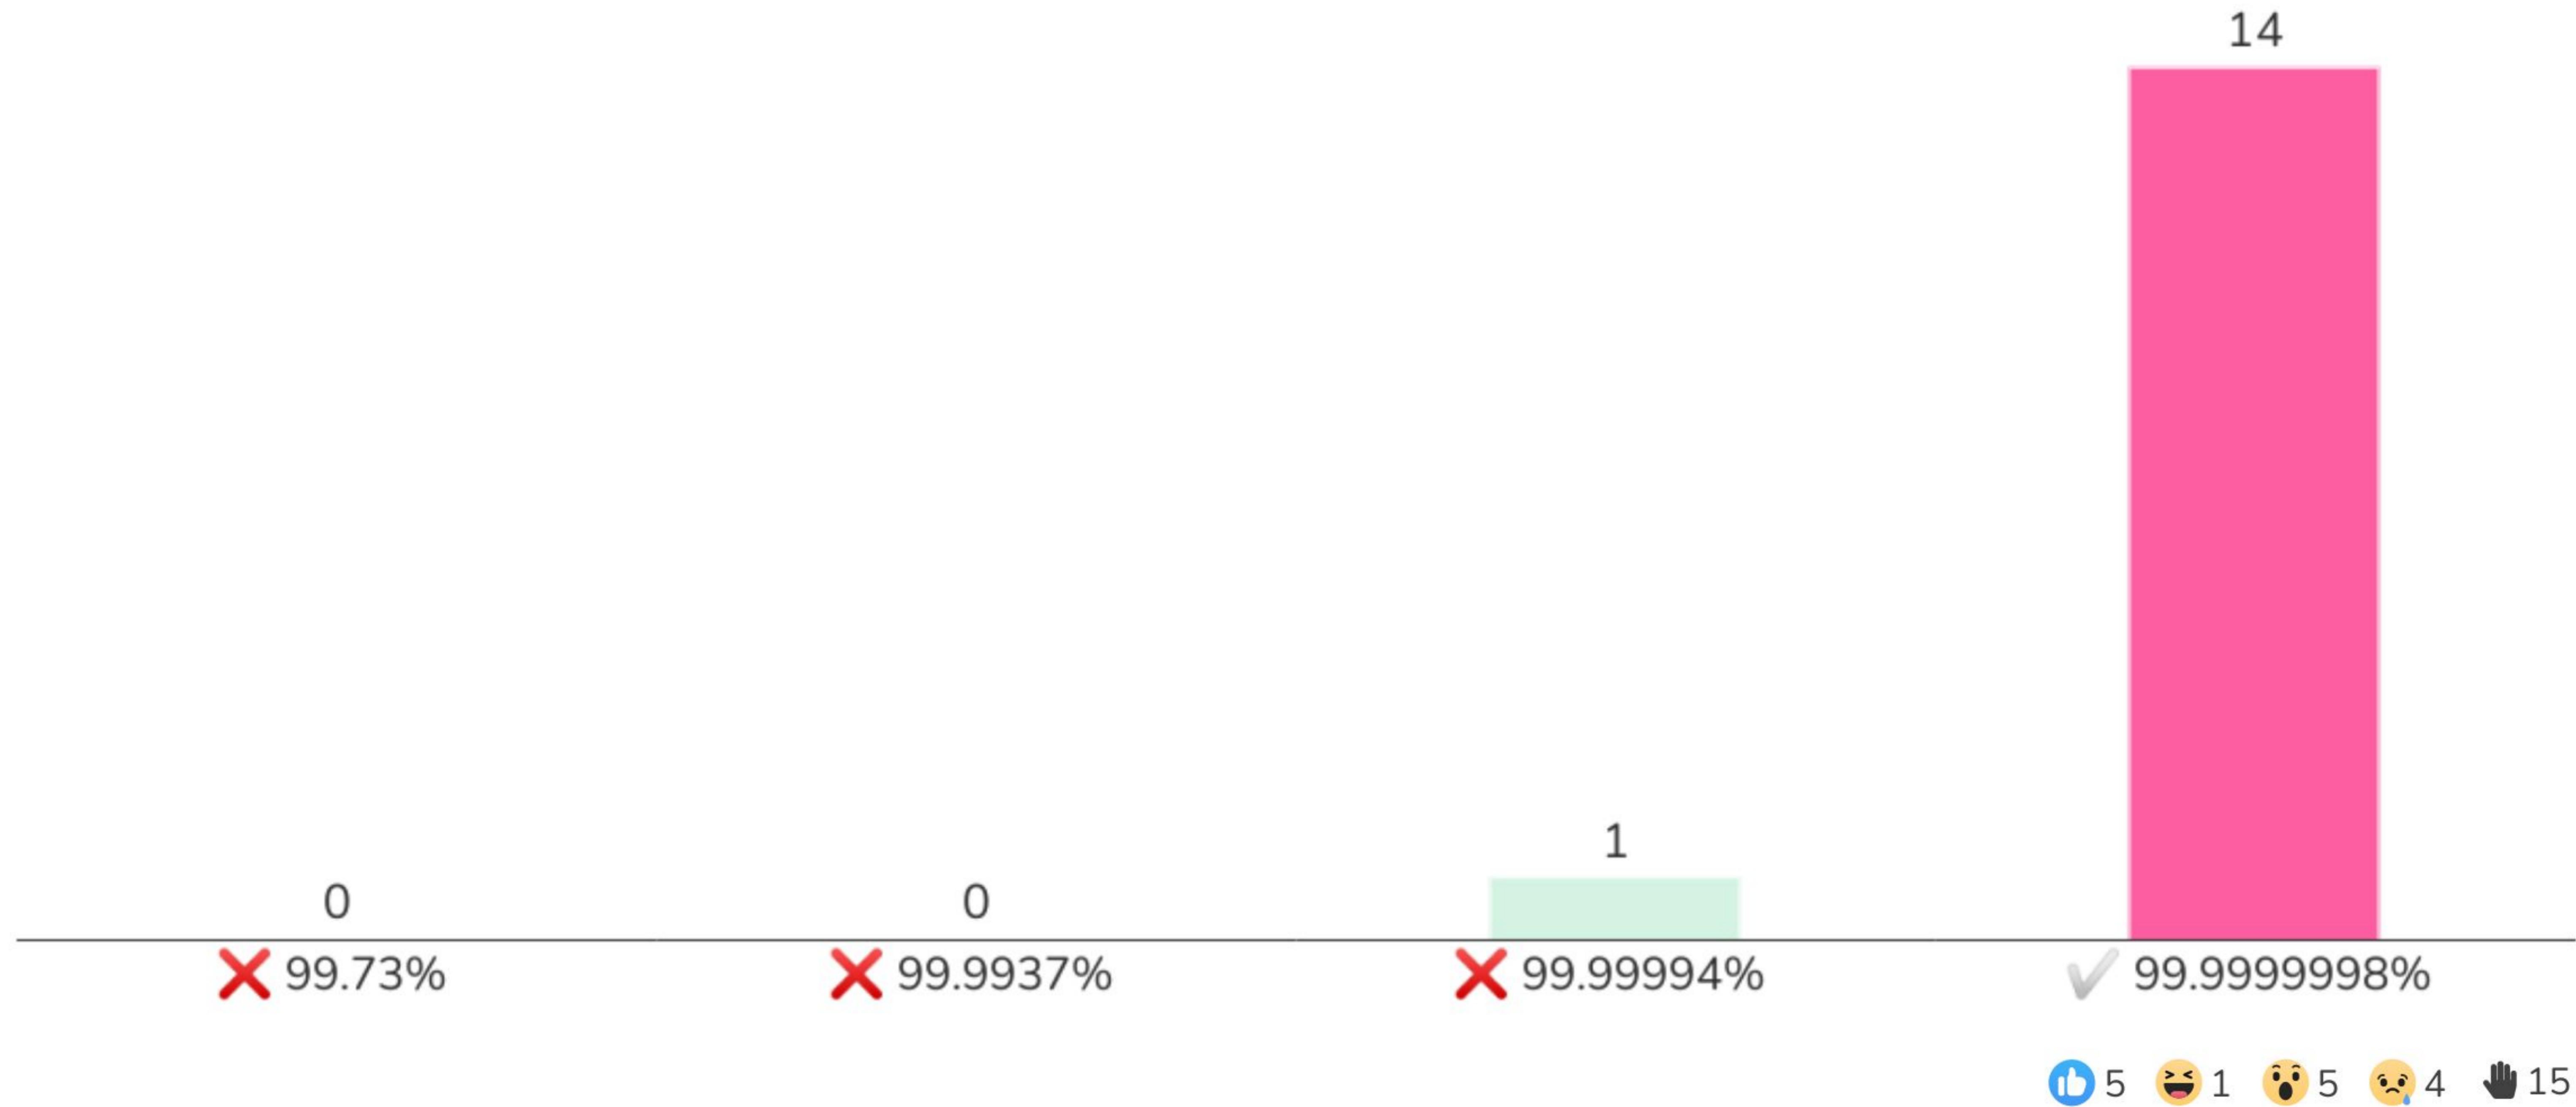

- Existing process
- Relevant to customers
- Solution not available (yet)
- Root-cause unknown
- Relevant for organization
- Measurable

Initiative

- 90 days
- 5-7 team members

What is the expected yield for 6σ ?

Define: Charting the Initiative

What's wrong with our process for applying for a Bachelor Thesis?

limit of 90 days

Anmeldung per Mail (umständlich)

Man wurde mehrmals nach Wochen hingewiesen, dass etwas fehlt

Search for second examiner

fehlende digitale Signatur, eigenhändige Unterschrift ist Pflicht

Die Frage ist bekannt, man darf jedoch noch nicht daran arbeiten

Papier-Prozess

man ist auf viele Personen (2 Prüfer, Prüfungsamt) angewiesen, zeitlich nah aneinanderliegend

Prozess nicht klar definiert

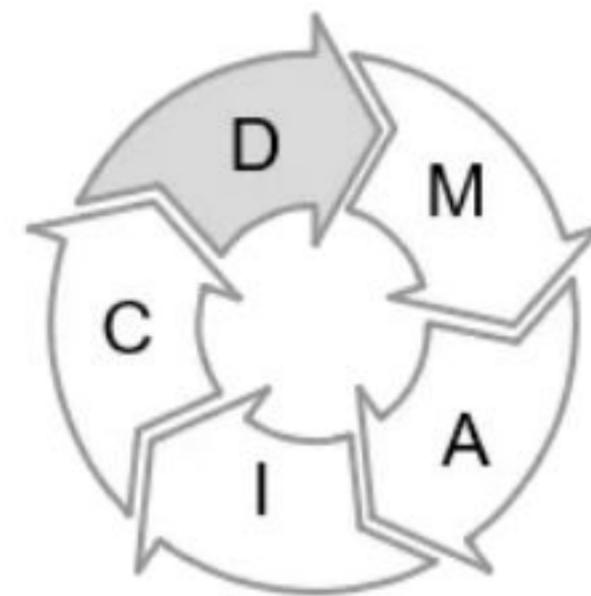

Dauert zu lang

Lange Wartezeiten

jeder Professor hat individuelle Anforderungen (Exposé etc.)

inoffizielle zusätzliche Anforderungen von manchen Betreuern

Define: SIPOC

Supplier	Input	Process	Output	Customer
Organisation, process or role providing input	Input required for performing the process	Major process steps (5–7)	Result created by the process	Customer (organisation, process or role) using the output

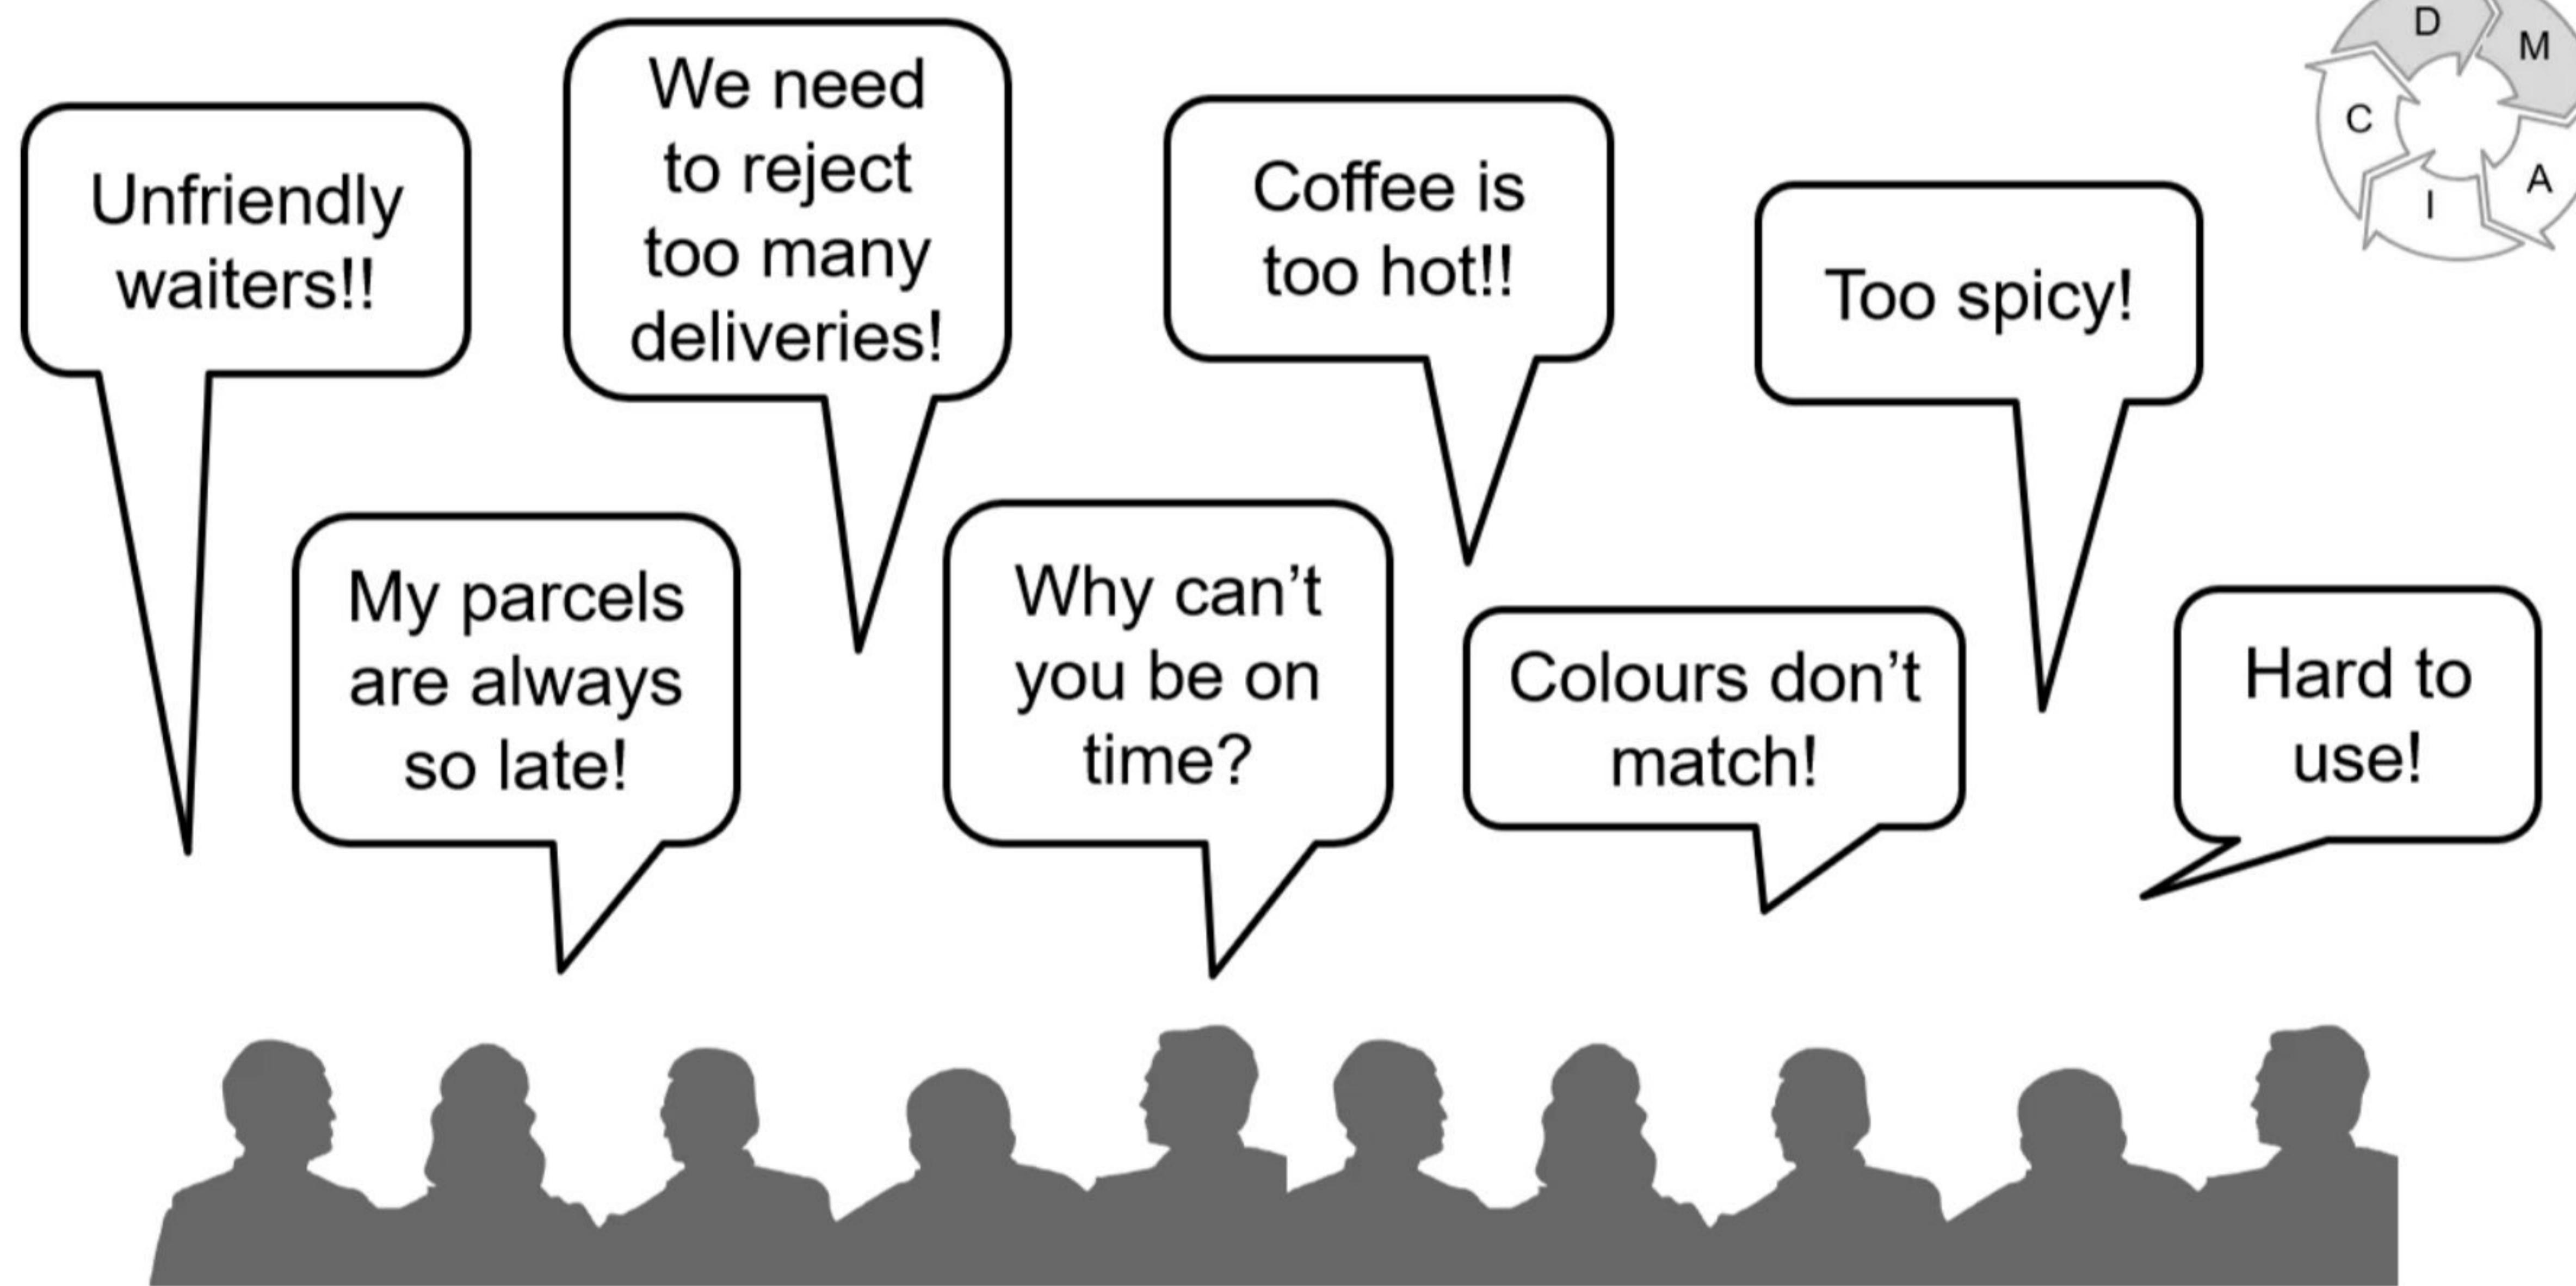

- Creating a SIPOC is team work using a wall and sticky notes
- There is no right or wrong, but just the agreement by the team
- Popular tool in process improvement initiatives

SIPOC: Inbound Mail International

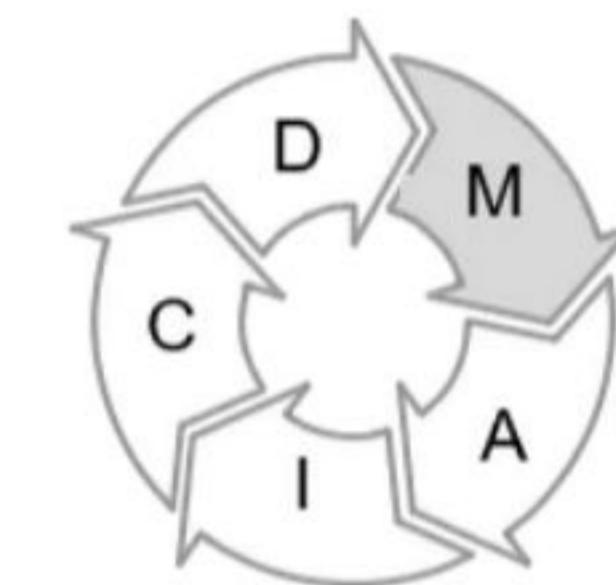

Supplier	Input	Process	Output	Customer
Airline	Consolidation (parcels in container or bag)	<ul style="list-style-type: none"> • Receive consolidation • Clear customs • Split consolidation • Sort parcels into container • Create manifest • Hand-over for national delivery 	Parcels sorted into container	Local postal company

Voice of the Customer -- Example

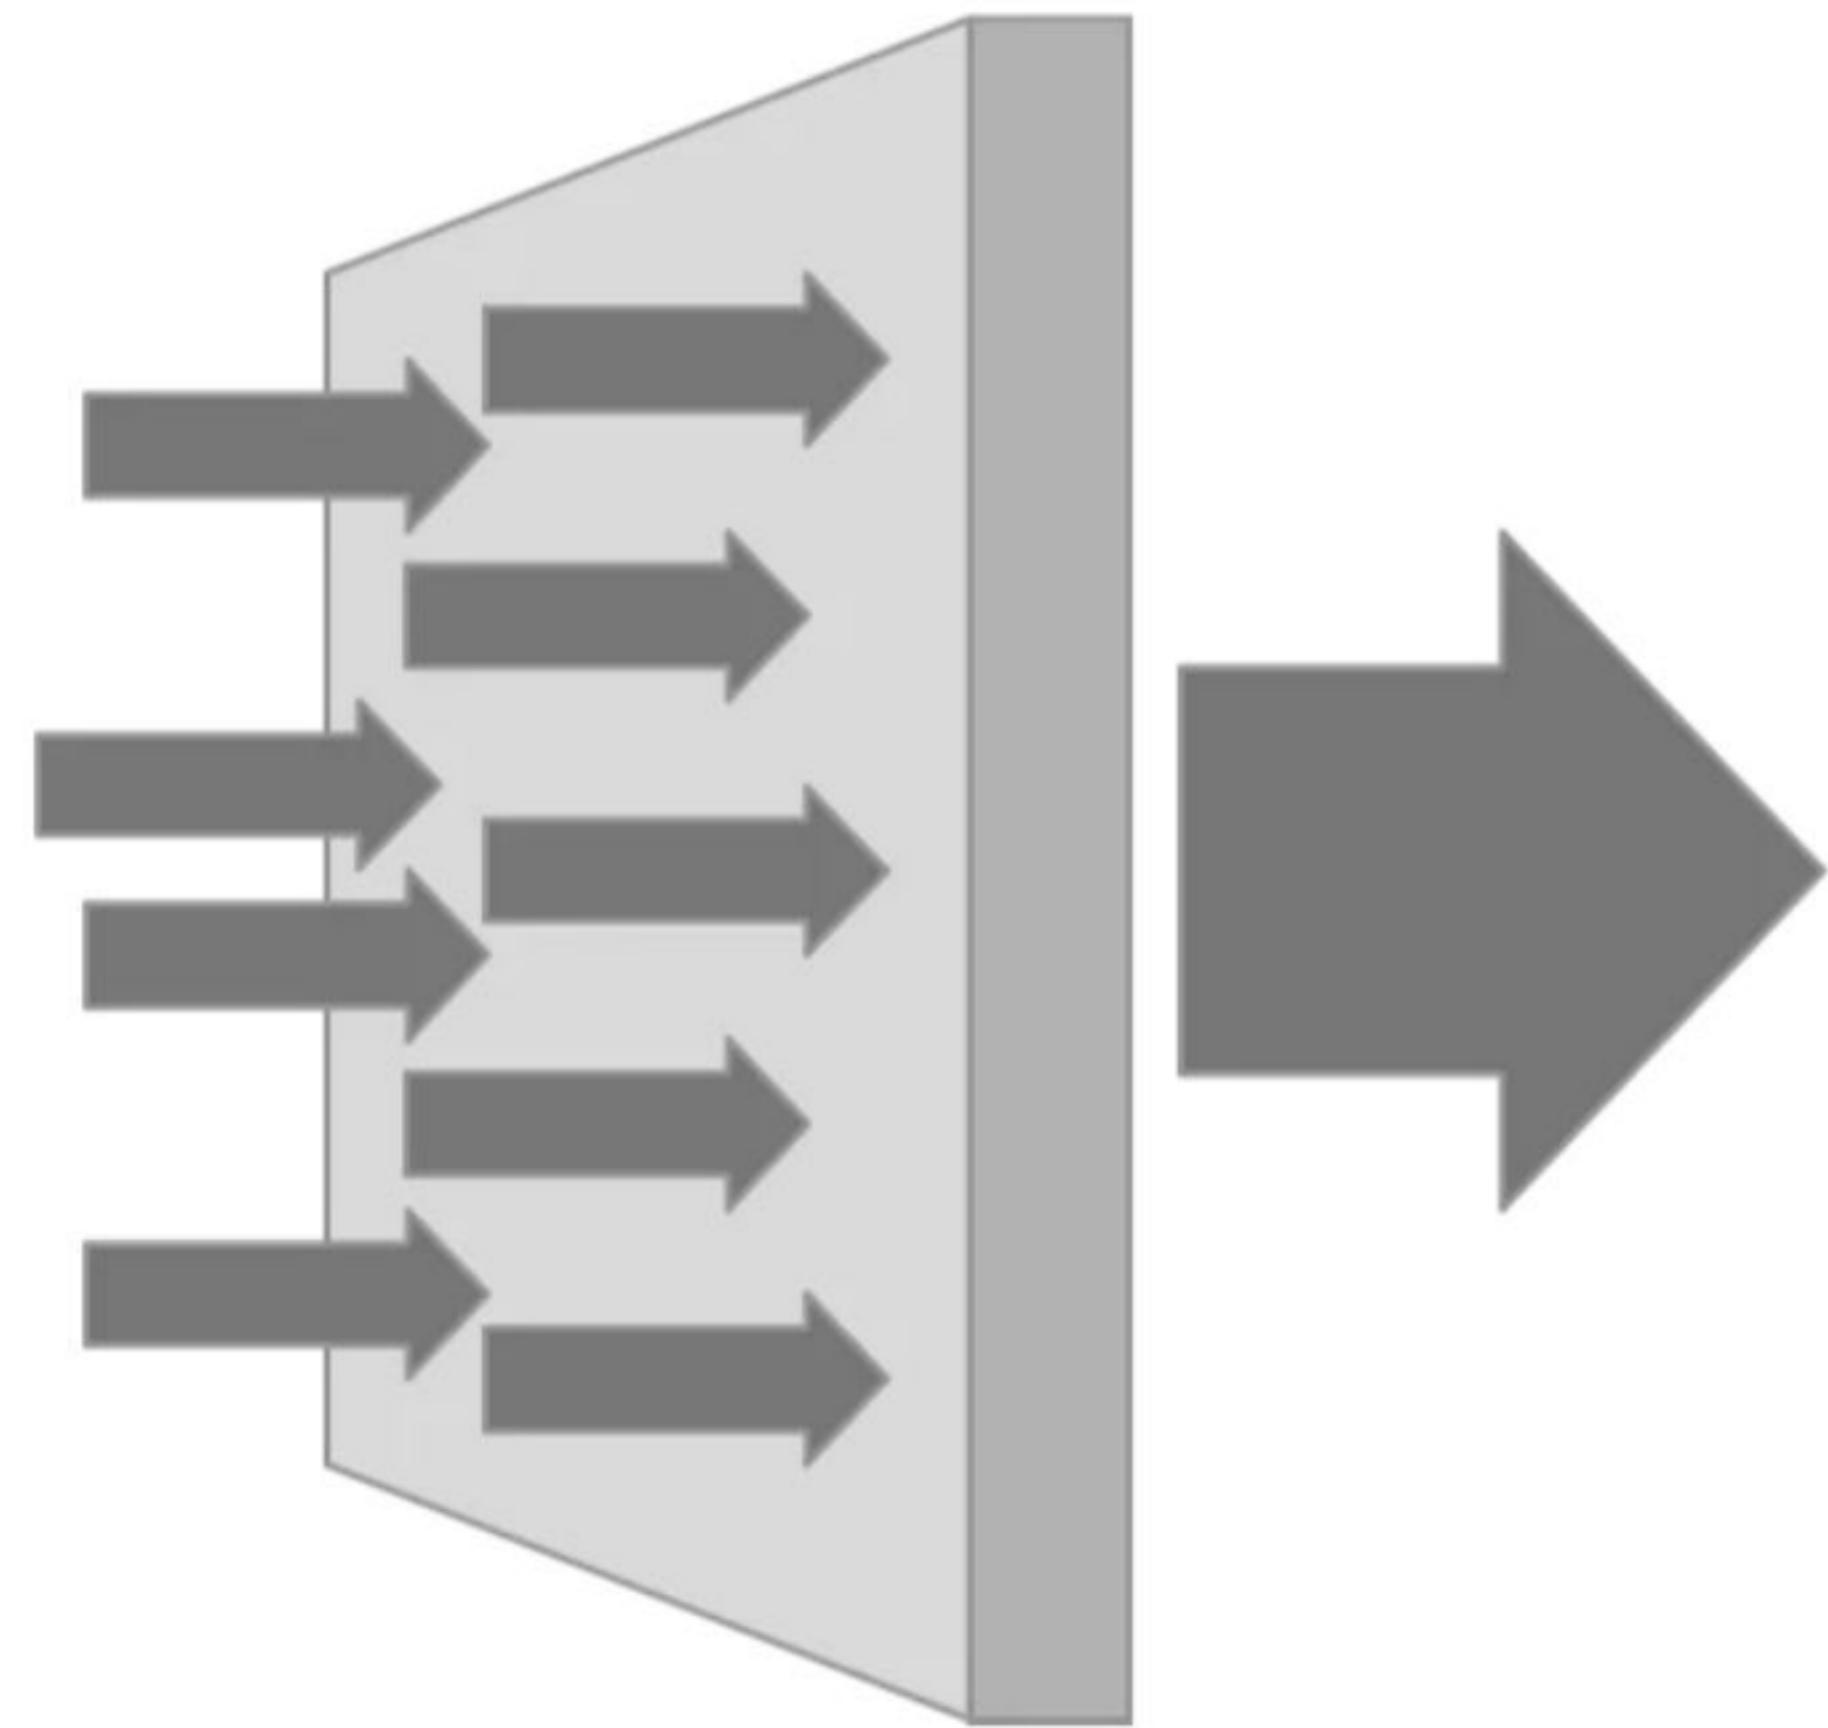

Critical to Customer -- Example

Voice of Customer (VOC)

- Feedback collected from customer
- Noted as stated by the customer
- Reflects issue perceived by customer
- Needs to be consolidated

Critical to Customer (CTC)

- Relevant aspects of the process
- Consolidated from VOC
- Specific and measurable
- Max. 5 CTC per initiative

Analyse: Methods

Root cause analysis

Process analysis

Value analysis

fmea

Ishikawa (or Fishbone) Diagram

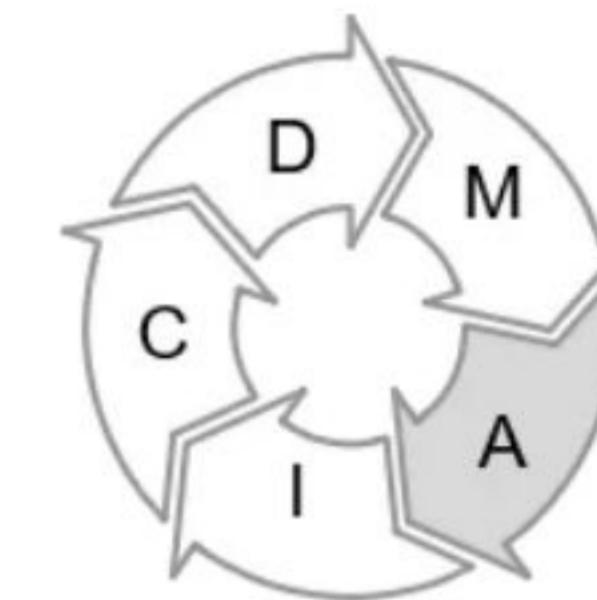

Finding the Root Cause: 5 Why

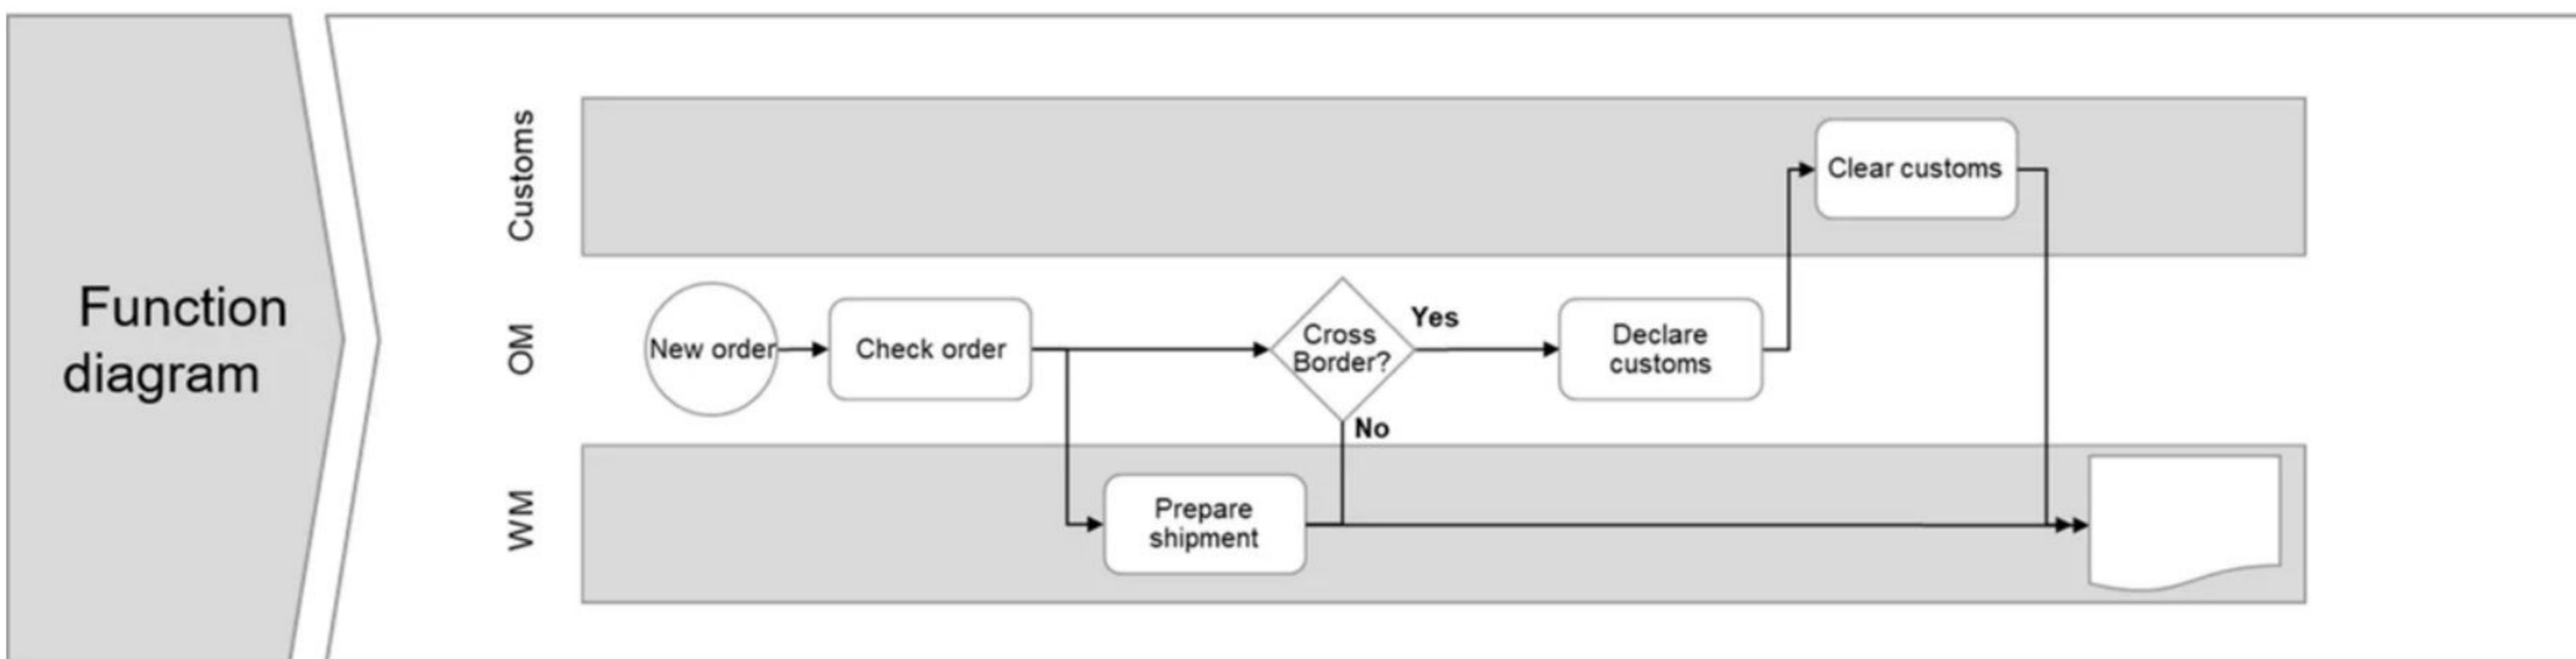

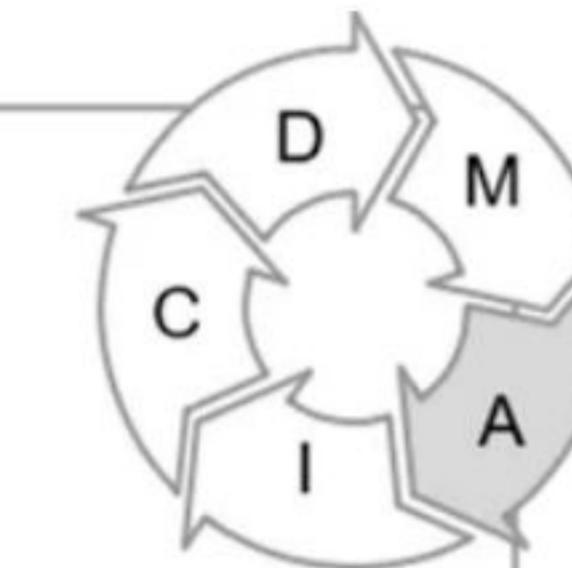

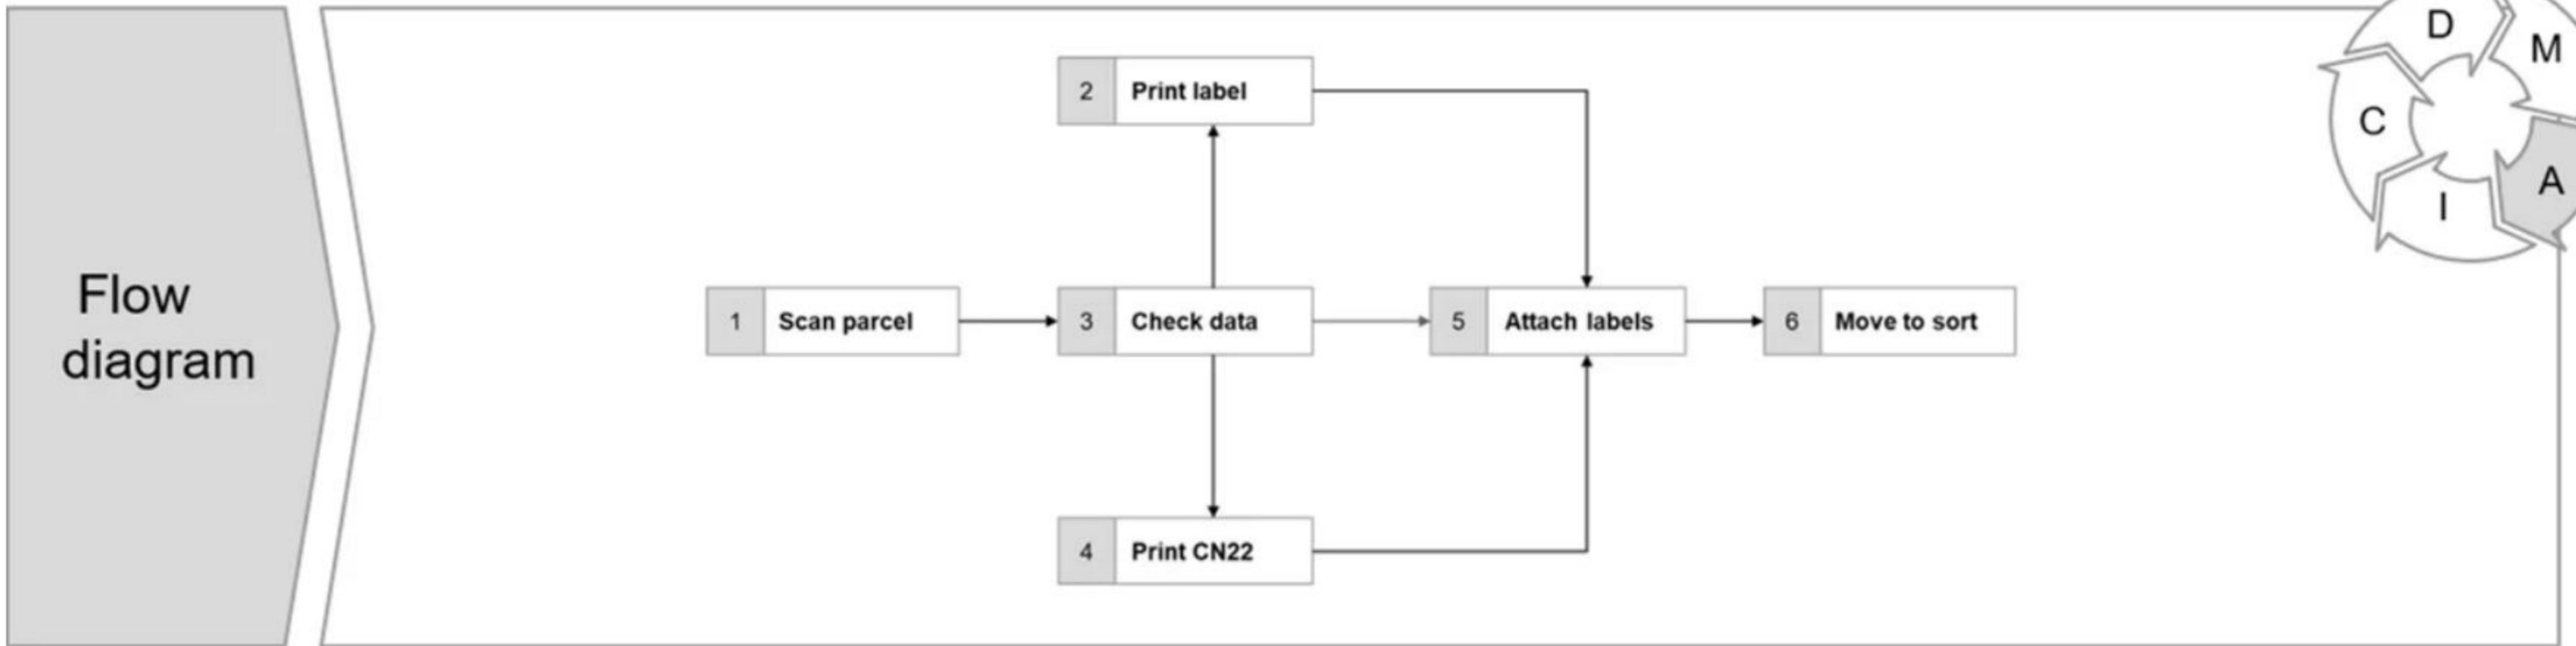

- Assumed reason for existing issue
- Generated by using Ishikawa or process analysis

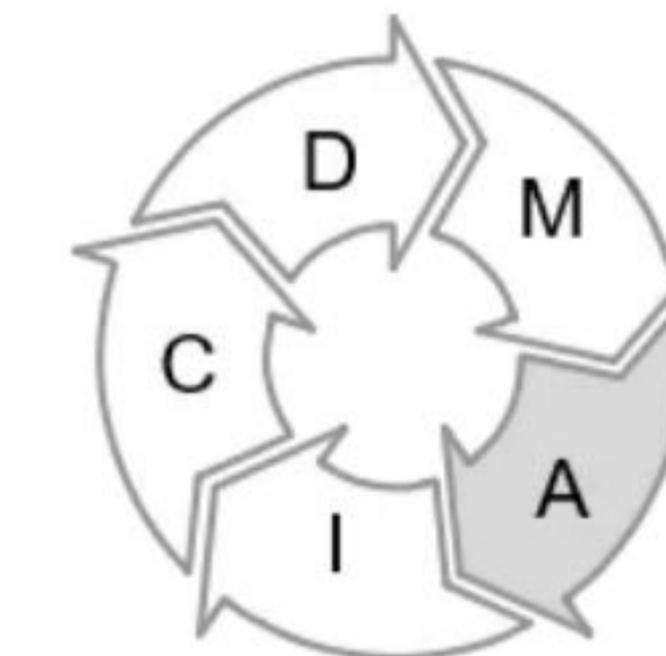

Root cause

Process Analysis

Focus on Value-add

Value-adding

- Directly creates value for a customer
- “Customer pays for it”

\$

Supporting value-add

- Required for executing value-adding activities
- Enables value creation

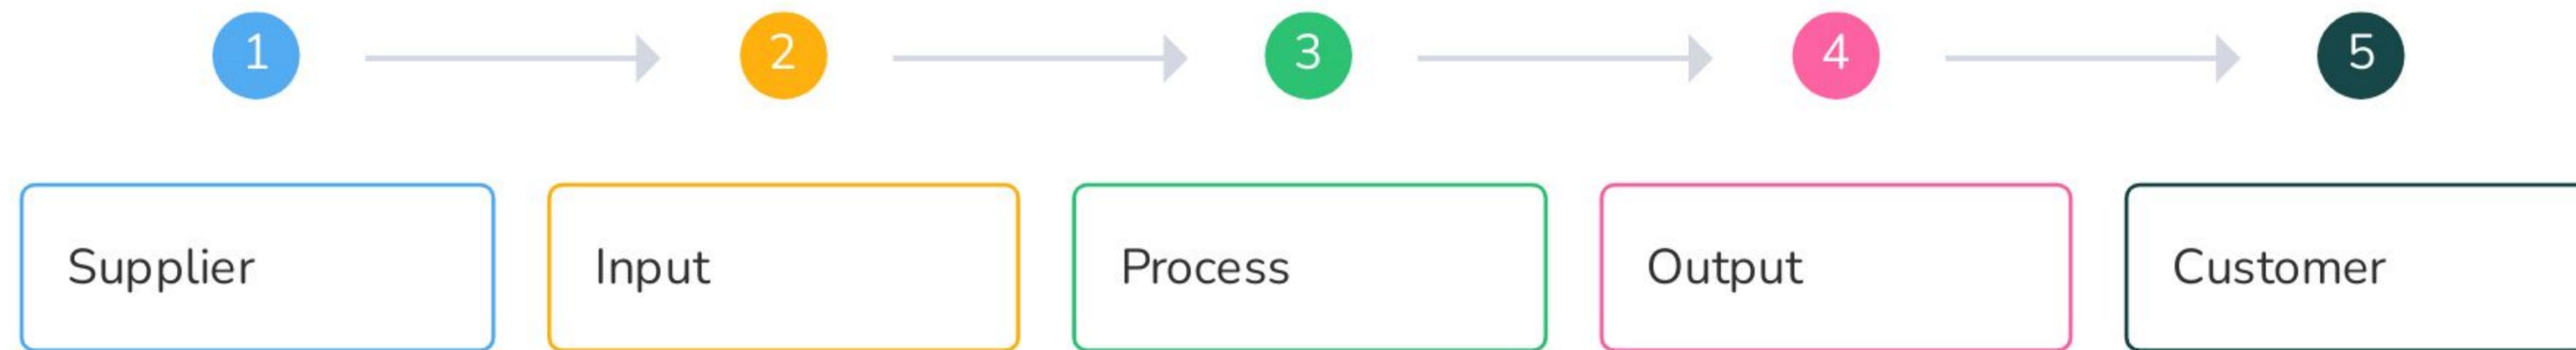

-> \$

Non-value-adding

- Doesn't create value (not even indirectly)
- Jap.: muda

\$

Bring the elements into the correct order.
